Since the 1960s quantitative linguistics has undergone a great development marked especially by attempts to work systematically with language phenomena on all language levels. Besides traditional areas where significant results were already achieved before the 60s (phonology, graphemics and lexicology), quantitative linguistics has now also penetrated into morphology, syntax, stylistics, history and typology of languages and, more recently, into semantics. This book presents a comprehensive account of the various developments and applications in quantitative linguistics. A feature of this book is that it is based on the use of quantitative methods in the description of language. The volume is compiled from extensive lists of references and indices of names and of subjects. Colorful and humorous pictures illustrate the meanings of the basic vocabulary of the Chinese language. This dictionary contains 10,000 Russian words in order of importance starting with the most common and finishing with words that occur about 8 times in a million. All the words have English translations, many have examples of usage and the entries include information on stress and grammatical irregularities. There is also a complete alphabetical index to the words in the list. A learner who knows all or most of these 10,000 words can be regarded as competent in Russian for all normal purposes. The list is designed for use by corpus and computational linguists. It provides the full text in a format that researchers can process and turn into suitable lists for their own research purposes.

This edited collection presents a range of methods that can be used to analyse linguistic data quantitatively. A series of case studies of Russian data spanning different aspects of modern linguistics serve as the basis for a discussion of methodological and theoretical issues in linguistic data analysis. The book presents current trends in quantitative linguistics, evaluates methods and presents the advantages and disadvantages of each. The chapters contain introductions to the methods and relevant references for further reading. This will be of interest to graduate students and researchers in the area of quantitative and Slavic linguistics.Russian Word Count is a statistical analysis of modern Russian literary texts of various genres. The book is useful to scientific and pedagogical workers in different fields. To facilitate work with the book, the words have been arranged in three fields. Thus, in adapting Russian texts, the authors of Russian text-books for non-Russians will find it easier to consult the alphabetical word frequency list, after preliminary acquaintance with the general word frequency list (the same is true of methodologists compiling Russian readers for home reading). In writing books of exercises and exercises for texts-books, it is more convenient to refer to the word lists arranged according to parts of speech. Such lists show which grammatical forms of a word are most frequently used. Their use will enable exercise compilers to provide repeated practice with words most frequently used in the grammatical forms which are the object of the exercises. Teachers may use this book to select the active vocabulary for a text-book (as is known the words of a textbook fall into active and passive). Since the words included in this book cover up to 80 percent of texts of different kinds, we believe they may be recommended as an active vocabulary. This book may also be used in selecting words for minimal dictionaries and grammars. Besides the applied role of this book as an objective basis for the compilation of minimal dictionaries, textbooks and different kinds of aids for students, it can also be considered simply as a frequency dictionary of modern literary Russian. As such it can be used by specialized theoreticians in the Russian language and applied linguistics. Multi Linguis offers you a frequency-thematic learner's dictionary of the Russian language. It includes up to 9000 essential words and phrases belonging to the levels from Beginner to Upper Intermediate II (A1 - B2.2 CEFR). The entries are divided into 150 vocabulary themes as well as 6 learning steps. They are arranged by parts of speech and then by themes, not by the alphabet. The book is intended to help you revise this language by another way but can also be used for translating or entertaining. You may use it separately or as an additional tool for any suited educational course. The Multi Linguis Project is based on the Wiktionary corpus and created by one person. The database of the Learner's Dictionaries includes 9 000 lemmas (words and phrases), their translations in many languages as well as transcriptions, transliterations and grammar information. All these lemmas are divided into 6 learning steps of 1500 entries each and also 150 vocabulary themes grouped in 30 super themes. They can be arranged by themes, steps, parts of speech or keywords, but never by the alphabet. Different types of dictionaries are offered for the same language.
